This invention describes a novel method for the use and preparation of call activating compositions which involves preparing a cell activating composition compositions which involves preparing a cell activating composition computating the about neutral or higher pH to produce a homogenate, (b) removing particulates from the homogenate, (c) optionally incubating the about neutral or higher pH to produce a homogenate, (b) removing composition activity. The methods can be used for improving the cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving cell activation activity. The methods can be used for improving creament outcome or reducing risk of treatment of e.g. cardiovsscular disease. Inflammatory disease, trauma, autoimmune diseases, arthritis, organ rejection, diabetes and diabetic complications, stroke, ischemia. Alfahemer si disease, myocardial infarction, haemorrhagic shock, diabetic retinopathy, diabetes, wonous insufficiency, unstable angina or trauma. They can be used in the veterinary treatment of a non-human subject. Procease inhibitors can be used to lower cell activation resulting from these disease and deficiencies. The detection of an alevated level of hydrogen peroxide dismutase (SOD) indicates laukocyte up regulation, e.g. indicative of the onset of an acuse cardiovsscular disease conset or ischemic complications. An elevated level of Hydrogen peroxide in plasma or whole blood and a low lavel in the presence of SOD is indicative of a chronic or immune compromised condition e.g. hypertension or a sepsis. ANYSO201-Y50314 represent peptides in warm in the method of the presence of son invanients.
                                                                                                                                                                                                                                                                                                   diagnosis and treatment of e.g. cardiovascular, Inflammatory, autoimmune or Alzheimer's disease, traume, arthritis, organ rejection,

The specification describes a fish serine proteinase. The proteinases of are useful as medicaments, for treating and perevanting a disease in a human or an animal such as pain, acute inflammation, chronic confirmation, arthritis, unflammed joints, burstits, otheroatthisis, inflammed joints, burstits, otheroatthisis, confirmation, drownle rehematoid arthritis, septic arthritis, thorowayigia, systemic lupus erythematosus, phlebits, tendinitis, rash, fibromyatigia, systemic lupus erythematosus, phlebits, tendinitis, rash, constant, facial seboriheir ecreem, eczema of the hands, confirmation, postianis, anne, eczema, other hands, confect neck, foreskin infections, athlete's foot, fistulae infections, keloids, boils, warts and allergic ich, hemorthoids, woundd sinch and diseases. They are also useful for removing dead or peeling of skin from otherwise healthy skin, and for treating or preventing at the which pathogenesis is caused by bacteria, virus, fungus, charastie or a protozoan or a receptor mediated binding is involved. The present sequence represents the amino terminal of bovine trypsin A
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cell activation; pancreas; treatment; cardiovaecular disease; trauma; inflammatory disease; autoimmine disease; atthritis; diabetes; stroke; organ refection; schemia, Alzheimer's disease; movocardial infarction; hemenorragic shock; diabetic retinopath; venous insufficiency; angina; trauma; procease inhibitor; hypercension; sepsis.
                                                                                                                                                                                                                                                                      Fish serine proteinase, useful as a cosmetic, medicament for treating eczeme, psoriasis, arthritis, and in the manufacture of the medicament for treating, preventing pathogenic diseases involving receptor addised binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          67.8%; Score 40; DB 22; Length 13;

This invention describes a novel method for the use and preparation of cell activating compositions which involves preparing a cell activating compositions which involves preparing a cell activating composition comprising (a) homogenizing pancreatic tissue in buffer at about the composition comprising (a) homogenizing pancreatic tissue in buffer at about the case of the composition of the c

The present sequence is bovine chymotrypsinogen. It was included in a review of sequence homologies of several plasminogen activators.

Plasminogen is the principal serine protesse zymogen in the stracellular fluids of vertebrates Its active form, plasmin, is cimplicated in pericellular proteolysis associated with a wide range of physiological and pathological processes. Plasminogen expression is cregulated by plasminogen activators which hydrolyse a peptide bond in plasminogen to convert it to plasmin or form tight binding complexes with plasminogen to convert it to plasmin or form tight binding complexes with plasminogen to spontaneously convert it to plasmin. The sequence homology analysis has identified a six amino acid peptide involved in plasminogen activation. This peptide is particularly useful when inserted to plasminogen activation/rate periods for full length human confidence casions activation for converting processes. Disaminogen activation/racognition side of plasminogen activation/racognition side of plasminogen binding processes. The polypeptides are useful in preparing thrombolytic agents for treating blood clotting disorders actuals has heart attack.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Human; protease; cancer; immune-related disorder; cardiovascular disease; neutonal-associated disease, metabolic disorder; inflammatory disorder; neuronal-associated disease, metabolic disorder; inflammatory disorder; mervous system disorder; sexual dystunction; pain; mood disorder; hypertematon; psychotic disorder; neurological disorder; dyskinesis; viral infection; human immunodeficiency virus; HIV; non-viral infection; ocular disease; oytostatic; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                        Polypeptide with plasminogen activator activity useful as thrombolytic agent for treating blood clot disorders e.g. heart attack, comprises 10 amino acid peptide fragment for recognition or activation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 67.8%; Score 40; DB 21; Length 245; 58.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      process, called pancreatic cancer antigens, given in AAB5400 to AAB5466. The human pancreatic cancer antigens have cyclotatic.

Table AAB5466. The human pancreatic cancer antigens have cyclotatic,
neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive,
yenecotogical, cardiant and antiinflammatory activities, and can be used
in gene therapy. The polymuclectide and proteins can be used for the preventing, treating or ameliorating a medical condition or a negocitylity to one in a subject. Binding partners to the process antigens can be used to concer, treat or prevent pancreatic disorders, sepecially cancer.

The pancreatic cancer antigen polymuclectides can be used to design nucleic pancreatic cancer antigens can be used to pancreatic cancer antigens can be used to cancer antigens only the pancreatic cancer antigens can be used to design nucleic pancreatic cancer antigens only the pancreatic cancer antigens can be used to design nucleic pancreatic cancer antigens only nucleic pancreatic cancer antigens only nucleic pancreatic cancer antigens can be used to design nucleic pancreatic endit hybridisation probes that can be used in chromosome mapping, linkage and diagnostic methods. The proteins can be used to design nucleic and diagnostic methods the proteins can be used to generate antibodies which are used to purify, detect and target the polypeptides, including both in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to treat or prevent neural, immune ayetem, mucular, reproductive disacreatinal, pulmonary, cardiovaccular, renal or percent neural in the arean of the pancreatic and ABB5457 propresent amenical in the arean menical in the arean middle to the cancer and target the processor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The present invention relates to the isolation of novel human processes, and the nucleic acids encoding them. The sequences of proceases, and the nucleic acids encoding them. The sequences of the invention are useful for treating diseases and disorders such as cancers (e.g. breast, colon, lung), immune-related diseases and disorders (e.g. nuflammatory diseases and asthma), cardiovascular diseases and disorders (e.g. reservoirs and asthma), cardiovascular diseases, methodolic disorders (e.g. disberse), imflammatory clisorders (e.g. rheuwator) diseases, methodolic disorders (e.g. rheuwator) diseases, methodolic disorders, capturion, perchotic disorders, neurological disorders hypotension, hypertension, psychotic disorders, neurological disorders in the nucleic acids and polypeptides are also useful for treating viral cinfections such as coular diseases (e.g. glaucoma) and macular cinfections such as coular disease (e.g. glaucoma) and macular contral coular disease (e.g. glaucoma) and macular contral contral cinfections coular disease (e.g. glaucoma) and macular contral co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Cell activation; pancreas; treatment; cardiovascular disease; trauma; inflammarory disease; autoimmune diseases; arthritis; diabetes; stroke; organ "refection; ischemia, Alzheimer's disease; myocardal infarction haemorriagic shock; diabetic retinopathy; venous insufficiency; angina; trauma; procease inhibitor; hypertension; sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                          Nucleic acids encoding novel human proteases, useful for useful for treating diseases and disorders such as cancers, immune-related diseases and disorders, cardiovascular disease (e.g. restenosis) and

Activation is localised to the thrombus because cleavage to plasmin is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosis, etc.
                                                                                                                                                                                                                                                                                                                      Activatable fibrinolytic and antithrombic proteins - activated by e.g. factor Xa, thrombin or activated protein C
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Activatable fibrinolytic and antithrombic proteins - activated by e.g. factor Xa, thrombin or activated protein C

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This protein is a plasminogen mutant cleavable by Factor Xa. Activation is localised to the thromus because cleavage to plasmin is by an enzyme of the blood clotting pathway. Compositions comprising the mutant plasminogen are used for treatment or prevention of thrombosie, etc.

See AAQ124594-01258

The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.inc/pub/published_pct_eequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cincericides, therapeutics and pharmacettical control of insecticides, therapeutics and pharmacettical churys. The invention discloses genomic DNA sequences (ABLIGISTS-ABLIGISTS-ABLIGIST), expressed DNA sequences (ABLIGISTS) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic polygeptidaes. The proteins and their associated DNA sequences are used in the treatment, prevention and disponse of medical conditions caused by per acnes. The disponders include SAPHO syndrome (synovitis, acne) practices. The disponders include SAPHO syndrome (synovitis, acne) previous system, however it is particularly involved in the inflammatory learons associated with a particularly involved in the inflammatory leafons associated with a particularly involved in the inflammatory leafons associated with a particularly involved in the inflammatory leafons associated with a particularly involved in the inflammatory leafons associated with a particularly involved in the inflammatory leafons associated with a binding agent that binding to the proteins of the invention and determining the amount of bound protein in the sample. The copyrppetides may be used as antispons in the production of antibodies generated from and activity of P. acnes polypeptides and threefore treat P acnes infections. These antibodies may also be used as affections of disposotic agents for determining P. acnes proteins of the rinked in a particular and activity of P. acnes proteins of also are also be used as antibodies may also be used as affections. The sequence date for the printed contrare limited immunosorbent assay (ELISA).

Note: The sequence date for this patent did not form part of the printed expression, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; vertis; enothalmitis; bone; joint; central nervous system; BilSA; inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                               Propionibacterium acnes polypeptides and nucleic acids useful for vaccinating against and diagnosing infections, especially useful for treating acne vilgatis

treferred to as open redefines subsaningly purilled making process.

In the appearitionin, ARNISTS C ARNISTS2 encode the human ORFX with the appearitionin, ARNISTS2 to ARNISTS2 encode the human ORFX approcess or treating to proventing a pathology associated with an ORFX associated disorder in humans, and inthe manufacture of a medicament for treating or syndrome associated with ARNISTS2 encode the human ORFX associated disorder in humans, and inthe manufacture of a medicament for treating or syndrome associated with SPRY associated disorder. ORFX polymucleotide syndrome associated with one of the properties of the process of the used in gene therapy. ORFX sequences can be used in the treatment of cancer, hyperproliferative disorders, itsnoorings, populated in being the unmouse, Raloid, degenerative disorders, haemorrhage, osteoarthritis, neurodegenerative disorders related to organ transplantation, cardiovascular disease, and disorders, infectious disease, autofmmune disorders sub as multiple aclerois are also useful for treating burns, inclasions, ulters, for treating osteoporosis, one degenerative disorders, or periodontal disease, and for gut reperfusion injury in various tissues and conditions resulting from a regeneration and treatment of lung or liver fibrosis, reperfusion injury in various tissues and conditions resulting from a resulting fare and an expension of the processing transplantation and contraction and contractions are a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ô

CATALITY TO CATULY Preferential cleavage: on the aminon side of bulky hydropholo cresidues, -Leu, -11e, -phe, as well as -Tyr.

SUBENIT: DURING HATCHING, THE 50 kDa MATURE ENZYME 18

AUTOLITYICALLY CLEAVED TO PRODUCE A MAJOR 38 kDa AND A MINOR 15 kDa FORM WHICH MAY BE DISULFIDE LINKED. SUBSEQUENT CLEAVED FOR WHICH MAY BE DISULFIDE LINKED. SUBSEQUENT CLEAVED FOR THE 38

FOR WHICH MAY STAGES EMBRYO, BLASTULA STAGE. HIGHEST ACTIVITY AT 12.5 HRS EMBRYO STAGE.
                                                                                                                                                                                                                                                                                                        MEDLINE-93223852; PubMed-8467915; Omnira K., Suzuki N., Suzuki N.; Suzuki N.; Suzuki N.; Suzuki N.; Sereco-specific inhibition of sea urchin envelysin (hatching enzyme) by a synthetic autoinhibitor peptide with a cysteine-switch consensus
                                                                                                                                                                                                                                                                                                                                                                                                                                            FEBS Lett. 321.84-88 (1933).

19.08-388-165-3

1 Sequence 3, Application US/08938365

2 Patent No. 598990

1 GENERAL INFORMATION:

APPLICAMT: Vang, Pan

1 TILE OF INVENTION: HUCHORDIN AND USES THEREOF

NUMBER OF SEQUENCES: 4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           COUNTRY: USA

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 7, P
